## 2.3. RF Layout Suggestion (aka Keep-Out Area)

Please follow below instruction to have better wireless performance. Make sure to keep the “No-Ground-Pad” as wider as you can when there is no enough space in your design.

No Ground Pad should be included in the corresponding position of the antenna in **EACH LAYER**.

Place the module towards the edge of PCB to have better performance than placing it on the center.

Welcome to send us your layout in PDF for review at [service@raytac.com](mailto:service@raytac.com) or your contact at Raytac with title “Layout reviewing – Raytac Model No. – YOUR company's name”.

**Please add via holes in GROUND area as many as possible, especially around the four corners.**

## 2.6. GPIO Located Near the Radio

Please refer to [2.5 Pin Assignment](#) on page 16 to 18 where identifies some GPIO that have recommended usage. To maximize RF performance, these GPIO are only available to use under standard drive, low frequency I/O only, wrong usage may lead to undesirable performance.

*Low frequency I/O is a signal with a frequency up to 10 kHz. SPI, I2C, UART, PWM are NOT low frequency I/O.*

## 8. Reference Circuit

This chapter shows a different combination of reference circuits. **Before getting started, please read below notes carefully because it is applied to all the reference circuits.**

- 32MHz crystal and RF (VDD) DC/DC inductor (Reg1) are already inside the module.
- Module is pre-programmed with Raytac testing code. Default is using LDO mode and need to add external 32.768khz to work.

You can use DC-DC mode *without* adding external 32.768khz, they are **NOT** related events.

- When using internal 32.768khz RC oscillator, please remove X2 / C12 / C13.
- Recommended L4 spec: 10 $\mu$ H, 0603 Chip Inductor, IDC, min = 80mA,  $\pm 20\%$ .
- When **NOT** using NFC, please remove NFC1 / C19 / C21.

## 8.1. Reg0 DC/DC Enabled

Recommend using when *the highest input voltage is equal or greater than 3.6V*. Supply power from VCC2 (VDDH).

Please check "[Nordic PCN111 Product Change Notification v1.0](#)" for more details about this reference circuit.

## 8.2. Reg0 LDO Mode

Recommend using when *the highest* input voltage is equal or greater than 3.6V. Supply power from VCC2 (VDDH).

## 8.3. Reg0 DC/DC and LDO Mode Disabled

Recommend using when *the highest* input voltage is less than 3.6V.

## 8.4. USB Disabled

This circuit only focuses on USB disabled. You can use it to go with other 3 reference circuits.

**Please leave D<sup>+</sup> & D<sup>-</sup> as NC when USB is disabled.**

### 9.11.1. FCC (USA)

The FCC statement should be included in the user manual when there is no enough space on label. Otherwise, it should be included on the label.

“This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions. (1) This device may not cause harmful interference. (2) This device must accept any interference received, including interference that may cause undesired operation.”

The final end product must be labeled in a visible area with the following: “Contain FCC ID: SH6MDBT50Q”.

### 9.11.2. TELEC (Japan)

When manufacturer is placing the product on the Japanese market, the product must be affixed with the following Specified Radio Equipment marking:

### 9.11.3. NCC (Taiwan)

請依下列標籤式樣自製標籤，標貼或印鑄於器材本體明顯處，始得販賣或公開陳列。

Series	標籤樣式
MDBT50Q Series	 CCAM18LP0820T7
MDBT50Q-P Series	 CCAM18LP0824T2

以 MDBT50Q 為例，平台廠商必須於平台上標示字樣「本產品內含射頻模組：ID 編號 CCAM18LP0820T7」。

「平台」定義如下：若器材組裝本案模組，消費者仍能正常使用該器材主要功能，該器材得視為平台。若器材不組裝本案模組，消費者不能正常使用該器材主要功能，該器材不能視為平台。該類不同廠牌型號器材組裝本案審驗模組後，須分別申請型式認證。

#### 9.11.4. IC (Canada)

The IC statement should be included in the user manual when there is no enough space on label. Otherwise, it should be included on the label.

“This device complies with Industry Canada license-exempt RSS Standard(s). Operation is subject to the following two conditions. (1) This device may not cause harmful interference. (2) This device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.”

The final end product must be labeled in a visible area with the following: “Contain IC ID: 8017A-MDBT50Q”.

## 10. Notes and Cautions

Module is not designed to last for a lifetime. Like general products, it is expected to be worn out after continuous usage through the years. To assure that product will perform better and last longer, please make sure you:

- Follow the guidelines of this document while designing circuit/end-product. Any discrepancy of core Bluetooth technology and technical specification of IC should refer to definition of Bluetooth Organization and Nordic Semiconductor as final reference.
- Do not supply voltage that is not within range of specification.
- Eliminate static electricity at any cost when working with the module as it may cause damage. It is highly recommended adding anti-ESD components to circuit design to prevent damage from real-life ESD events. Anti-ESD methods can be also applied in mechanical design.
- Do not expose modules under direct sunlight for long duration. Modules should be kept away from humid and salty air conditions, and any corrosive gasses or substances. Store it within -40°C to +125°C before and after installation.
- Avoid any physical shock, intense stress to the module or its surface.
- Do not wash the module. No-Clean Paste is used in production. Washing it will oxidize the metal shield and have chemistry reaction with No-Clean Paste. Functions of the module are not guaranteed if it has been washed.

The module is not suitable for life support device or system and not allowed to be used in destructive device or systems in any direct or indirect ways. The customer agrees to indemnify Raytac for any losses when applying modules in applications such as the ones described above.
